BIOMIMICRY

: when people learn from and mimic the strategies living organisms used to replicate during human development of projects.

<https://asknature.org/resource/hooked-on-you/>

VELCRO

Invented by George de Mastral in 1941.

Inspired by burrs that were stuck on him and his dog.

Under a microscope the burrs had hooks and the fur/clothes had loops.

In French, velours means loop and crochet means hooks combined is velcro.

Velcro company started in 1959.

BURRS

Burrs: seed pods that plants use to spread its seeds

Different plants that become burrs:

- White Avena
- American Lopseed
- Downy Agrimony
- Pointed Leaved Tick Trefoil
- Sweet Cicely
- Cockleburs
